

Turn one high-friction business process into a production AI workflow

You already run monday.com. The work now is turning a process your teams still handle manually into one that runs on the platform you already own, with less effort, clearer ownership, and AI operating inside boundaries your security, finance, and operations teams can approve.

Trundl takes a process that already carries meaningful volume in your business, rebuilds it on the monday.com platform you already run using AI, automation, integrations and governed workflows, and measures the result against an agreed baseline after go-live.

Where we typically start

The strongest starting point is usually a process that is repetitive, difficult to see, or consuming too much team time, whether it sits outside monday.com today or only partly on it.

- Request intake and routing
- Resource and capacity planning
- Client onboarding
- Procurement and vendor workflows
- Automated project status reporting
- Project risk and escalation
- Change requests and scope control
- Executive portfolio and OKR reporting

What you get

1

Find the right problem

We work with the people doing the work to map the current process, identify the highest-value opportunity, establish baseline performance and agree how success will be measured before anything is built.

2

Build it for production

We design and implement the workflow on monday.com, connect the relevant systems, and define what AI can access, what it may do automatically, where human approval is required and how AI consumption will be controlled.

3

Launch it and measure the result

We train the team, move the workflow into production, support adoption and review performance at 30, 60 and 90 days against the baseline agreed at the beginning.

Choose the scope that fits the problem

PACKAGE	BEST FOR	SCOPE	TYPICAL DURATION	FIXED FEE
Process	A first production workflow	1 process · 1 team · 75 users in scope	Up to 8 weeks	\$18,500
Function	Connected work across teams	2 processes · up to 2 teams · 300 users in scope	Up to 12 weeks	\$38,500
Portfolio	A shared operating model	Up to 5 processes · up to 3 teams/entities · 750 users in scope	Up to 16 weeks	\$72,000

Every package includes: discovery, governance, implementation, enablement and 90-day measurement.

What is included

- ✓ Discovery and current-state process mapping
- ✓ Baseline metrics and agreed success criteria
- ✓ AI governance and permission design
- ✓ End-user enablement and handover
- ✓ AI readiness and opportunity assessment
- ✓ Solution design and monday.com implementation
- ✓ Integration with relevant systems
- ✓ Post-launch support and 30, 60 and 90-day reviews

Work still running outside monday.com can be brought in. Because cost depends on volume, structure, history and source systems, migration of live work from spreadsheets, inboxes and legacy tools is assessed in the first phase and quoted separately before implementation begins.

Why Trundl

You already own the platform. What you are buying here is the work of getting a real process running on it, safely, with someone accountable for whether it moved.

Two platforms, one delivery team

We build and support on both monday.com and Atlassian, so a workflow that reaches into engineering systems is designed once, by one team, rather than handed between vendors.

Governance agreed before build

Permissions, data boundaries, approval points and AI credit consumption are settled with your security and operations stakeholders up front, so the workflow arrives at review ready to pass.

We move live work, not just configure boards

Existing work, history and relationships come across from spreadsheets, inboxes and legacy systems using our own migration tooling, so your team is not running two processes in parallel for a quarter.

Accountable to a number you set

We measure the baseline before we build and review against it with you at 30, 60 and 90 days, using success criteria you agreed at the start.

Start with one workflow

Bring us a process that is consuming too much time, creating avoidable manual work, or giving leadership too little visibility.
